

ST. JUDE CYTOLOGY & ONCOLOGY LABORATORY

DEPARTMENT OF CLINICAL PATHOLOGY | FINE NEEDLE ASPIRATION (FNA) REPORT

PATIENT DEMOGRAPHICS & INTAKE

Patient Name: Elena Vance Age / Gender: 54 Yrs / Female Date: 2026-08-14

Patient ID: Patient-BC-101 Accession #: ACC-2026-0801 **Status:** Final Diagnostic

AUTOMATED DIGITAL CYTOMETRY MEASUREMENTS

Marker Parameter	Value	Unit	Reference Range	Clinical Flag
Cell Size (Radius Mean)	20.57	um	10.0 - 14.5 um	HIGH RISK
Cell Texture (Texture Mean)	17.77	std	10.0 - 15.0 std	ELEVATED
Cell Perimeter (Perimeter Mean)	132.90	um	60.0 - 90.0 um	HIGH RISK
Nuclear Area (Area Mean)	1326.0	um2	300.0 - 650.0 um2	HIGH RISK
Cell Smoothness (Smoothness)	0.0847	idx	0.060 - 0.100 idx	NORMAL
Cell Compactness (Compactness)	0.0786	idx	0.030 - 0.080 idx	BORDERLINE
Cell Indentation Depth (Concavity)	0.0869	idx	0.010 - 0.050 idx	ELEVATED
Cell Indentation Count (Points)	0.0702	cnt	0.010 - 0.040 cnt	HIGH RISK

PATHOLOGIST DIAGNOSTIC IMPRESSION

Clinical Impression: Malignant (High-Risk Infiltrating Ductal Carcinoma)

Cytological Notes: Fine needle aspirate cytology reveals marked cellular enlargement, hyperchromatic nuclei, and frequent nuclear contour irregularities consistent with invasive malignancy.

Signed: Dr. Marcus Vance, MD, FCAP (Chief of Cytopathology)
